	Answers
	Binary
	Machine Learning
	Bugs
	✓ Correct
2.	Why does the DNN for Fashion MNIST have 10 output neurons?
	O To make it train 10x faster
	O To make it classify 10x faster
	O Purely Arbitrary
	The dataset has 10 classes
	✓ Correct
3.	What is a Convolution?
	A technique to make images smaller
	A technique to make images larger
	A technique to extract features from an image
	A technique to remove unwanted images
	✓ Correct
4.	Applying Convolutions on top of a DNN will have what impact on training?
	It will be slower
	It will be faster
	○ There will be no impact
	It depends on many factors. It might make your training faster or slower, and a poorly designed
	Convolutional layer may even be less efficient than a plain DNN!

1. The diagram for traditional programming had Rules and Data In, but what came out?

5.	What method on an ImageGenerator is used to normalize the image?
	normalize
	○ flatten
	rezize()
	rescale
	✓ Correct
6.	When using Image Augmentation with the ImageDataGenerator, what happens to your raw image data on-disk.
	A copy will be made, and the copies are augmented
	A copy will be made, and the originals will be augmented
	<ul><li>Nothing</li></ul>
	The images will be edited on disk, so be sure to have a backup
	✓ Correct
7.	Can you use Image augmentation with Transfer Learning?
	No - because the layers are frozen so they can't be augmented
	Yes. It's pre-trained layers that are frozen. So you can augment your images as you train the bottom layers of the DNN with them
	✓ Correct
8.	When training for multiple classes what is the Class Mode for Image Augmentation?
	Class_mode='multiple'
	class_mode='non_binary'
	class_mode='categorical'
	Class_mode='all'
	✓ Correct
